## What is Clone Phishing?

Clone phishing is different than a typical phishing attempt. A clone phishing attack uses a legitimate or previously sent email that contains attachments or links. The clone is a near copy to the original where the attachments or links are replaced with malware or a virus.

## How to stay protected:

- Be aware that Clone Phishing attack exists
- Before clicking on any landing page, hover over the link in the email to confirm the website address is taking you to
- Keep your credentials secure by not sharing them with anyone in particular
- Look out for suspicious errors in the email as cloned emails are not always 100% legitimate in looks
- Always submit your information to the websites that have an "HTTPS" prefix before the URL of the website.
