## Cyber Hacks: Watch Out for Spam!

Spam is the electronic equivalent of 'junk mail'. However, spam is more than just annoying, it can also be dangerous. Spam can include malicious links that infect your computer with malware.

### ***Useful tips to protect yourself against spam email and phishing:***

- Attackers often use spoofed email addresses (email addresses that appear to come from a trustworthy source) to trick the recipient.
- Don't click any links or attached files, including unsubscribe links. Spammers sometimes include these links to confirm that your email address is legitimate, or the links may trigger malicious webpages or downloads.
- Always report suspicious emails using the Cofense Report Phishing button located in your Outlook toolbar. By taking this small action, the correct department will be alerted and will put controls in place to avoid further Spam emails!
